Civ 3 Cheat Engine

[Download](#)

HOW TO READ - Civilization 3 . with code that does nothing. Part 3. Code injection. Part 4. Lua scripts. I have used Cheat Engine in the past, . So the code: "goto Selection" doesn't seem to call anything as nothing happens. I have tried different ways to use it. I tried it on all levels and it didn't do anything. I even tried other methods that helped, how to use "goto Selection", "goto Location". I won't talk about all of them here, but I will say that apparently all the codes I tried didn't do anything. I have no idea. Maybe you have an idea that can help.
