If you get it and you have an email account which is in your isp address, you can email the list requesting you be removed from the mailing list. On my exchange server there was a list of people who are not allowed to send email in mbox format .exchange list not allowing email to have html content Empowerment for Women is about helping to prepare women and men for the workplace in such a way that makes a difference in their lives and those of their families. The Empowerment Practitioner (EP) Trainings are designed to empower practitioners to create meaningful opportunities to assist people in their community/rural setting. Empowerment for Women was initiated by Caroline Lovett following her own personal transformation. Caroline's initial training and subsequent 4 years of mentor experience has led her to develop the Empowerment Practitioner Training which is an accredited post-graduate level 6 training program for people with an accredited diploma. Certification is available to people with a diploma level 3 and above who have participated in a 3 day Empowerment Practitioner Training workshop. These are one on one mentored trainings. There is a group tuition option available for a larger cohort. Empowerment Practitioner Training Facilitators & Mentors The following experienced professionals are able to coach you through the Empowerment Practitioner Training:Q: SQLite query integer by name Hi I'd like to run a query in sqlite which selects all those rows who has the specified name. It is a simple but really confusing problem. for example, if I have a table called item and it has columns like name, type and price. And I have 2 items named "apple" and "zucchini" and type is "hard" and price is 10 If I want to get the item which has name="zucchini", my sql would be: select name from item where type="hard" and name="zucchini" It is pretty clear to me. I have two problems here: 1. I do not want to use wildcard to replace all name 2. I do not know whether a float value can be named (I dont want to use it only for the reason like: 'this name=1,name=2 and so on') I really hope someone helps me

A: Presumably it's a hidden character in the code, but I couldn't figure out how. One would hope that you could post the entire code in question to see what it looks like, but I can see that you're a bit pressed for time so I'll leave it up to you to figure it out. 3e33713323
