Engine/Optical Dynamic Performance Check → Check Engine Metric Analysis The Check Engine Metric Analysis (CEMA) is the dynamic analysis of your vehicle. If you have a PC with a Graphics Card and a few minutes of your spare time, then the CPU check Engine will show you a 3D-graphs and let you input parameters from the equipped Auto-Tune or ZF-Tuning-Line. The program will then predict how the tune will influence the power, the fuel consumption, the emission of CO, NOx, HC, PM etc. It will help you to decide, if you have any chance to optimize the existing tune. Furthermore, you can compare your vehicle with a Vehicle Standard. Vehicle/Video Simulation → CamSim Simulator In CamSim Simulator, you can simulate the behavior of your vehicle in different driving scenarios. You can choose your vehicle from a list of vehicles and define up to 10 scenarios. You can use this tool to study the engine, the braking system and the chassis. CamSim Simulator Description: This information is based on the currently supported vehicle checks. The offered information is updated regularly. Is the turbocharger protection activated?If the turbocharger protection is switched off, all changes to the turbocharger are ignored. The voltages of the Turbocharger take no influence from the performance and the acceleration changes. Is the engine protection active?The engine protection guarantees that the engine fails to run when it overheats. The protection duration is 2s. With its aid, the temperatures in the engine can be lowered. The protection is not applied, when the engine is not in operation. The protection cannot be deactivated and the active protection functions last forever. Is the clutch active?The clutch is active, if the clutch is pressed. Is the dual clutch active?The double clutch is active, when the double clutch is pressed. Is the battery protection activated?The battery protection applies when the battery voltage drops too low. If the battery voltage drops below a defined voltage, all engine-related functions are deactivated. The battery protection can be deactivated by the driver. Is the battery protection active?The battery protection guarantees a normal operation of all engine-related functions, when the battery voltage drops too low. The protection duration is 10s. 09e8f5149f
