AutoCAD is the best CAD software for the architects. With AutoCAD, you can design structures, bridges, airports, and other types of buildings. With AutoCAD, you can work on a structure all by yourself without waiting for other people. In this article, I'll share with you some of the best AutoCAD tips and tricks which will surely help you improve your drawing efficiency.

10 AutoCAD Tips & Tricks

1. When you are using a drill in AutoCAD, the first thing you should see is the tooltip that says “Drill selection”. This is to indicate that the Tooltip window is now active and the user can select the necessary element.

2. If you're working on a new project, the most important thing to remember is that any tool which creates components must be assigned to the proper layer.

3. If you have two identical objects and are hiding or unhiding the one which isn't visible, hide or unhide all the objects first then click the Show Hidden checkbox to unhide the object.

4. Sometimes the status bar doesn't update after you undo or redo a command. To update the status bar, click the Update Statusbar button on the status bar.

5. Once you select an element, you can easily move it to any layer using the Move tool.

6. You can use the Navigate tool to move an object in AutoCAD. With this tool, you can move from one object to another using the same layer.

7. If you are designing a complex project, it is better to divide it into layers. By dividing a project into layers, you can quickly identify which layer a tool belongs to, and thus avoid ambiguity.

8. If you have a line and you want to change its size or color, you can simply double-click the line. This will highlight the line and, once you double-click again, the size or color of the line will be updated.

9. When you are using the Move tool, you can increase the speed and accuracy of your moves by using the Track Mouse button on the toolbar. This button allows you to move with the cursor and also let you quickly select the object to be moved.

10. The Line Style palette allows you to customize the line appearance to match your requirements. You can increase or decrease the line thickness
