Developed by G.Rev., THE Elden Ring Cracked 2022 Latest Version is a new Fantasy Action RPG set in the Lands Between, a vast world between the lands of Earth and Elenna. The game places its emphasis on the character's journey as it connects the world of non-playable characters and monsters to that of players who choose to explore the world of Tarnished. In the world of Tarnished, players' characters are gradually made dirty and tainted. However, the Tarnished will revive and be revived, and while memories of former lives will be lost, the Elden will forgive their sins. Through hardships and bravery, the players will fight in a large-scale war with goblins and monsters to defend the lands of Tarnished and protect the world of the Elden. The game is separated into episodes, each with an introduction, main story, and concluding story. The game has a typical RPG battle system that combines traditional RPG elements with new Fantasy Action RPG elements. Players can freely move

Q: Uniformly distributed over the surface of the sphere? How can I prove that the sphere, \mathbb{S}^2 , is the only surface with a uniform distribution over its surface? A: Let $S^2 \subset \mathbb{R}^3$ be the unit sphere centered at the origin. The surface of this sphere is a torus $T^2 = S^1 \times S^1$ and you are asking if $f: T^2 \rightarrow \mathbb{R}$ is uniformly distributed (i.e. for every choice of $x, y \in T^2$ we have $\Pr(f(x)=y)=1/4\pi^2$), then f must be constant. We are not asking about the restriction of f to the sphere itself. This follows easily from the fact that f is constant on the quotient space $S^1 \times \mathbb{R}/(2\pi) \mathbb{Z}$ where for every $x, y \in T^2$ we have $f(x) = f(y)$.

1. Technical Field This disclosure relates to a power connector, and more particularly to a power connector adapted to be connected to a power board. 2. Related Art Referring to FIGS. 1 and 2, a conventional power connector 1 includes a housing 10, and a socket 12. The socket 12 has a plurality of conductive contacts 121 extending through a first opening 102 of the housing 10. The housing 10 defines a second opening 103 therein. A projection 101 projects upwardly from an inner side of the housing 10. The socket 12 is disposed over the first opening 102 of the housing 10. The socket 12 includes a metal shield 123 covering over the first opening 102 of the housing 10 and the contacts 121 extending through the first opening 102. The socket 12 further includes a C-shaped profile 134 mounted on the metal shield 123 and defining a second opening 135. The metal shield 123 defines a plurality of insertion holes 124 extending vertically through the metal shield 123. The insertion holes 124 are spaced apart from each other by a predetermined distance. The power connector 1 further includes a metal plate 131 mounted on a bottom of the projection 101, and a plurality of contact holes 132 formed in the metal plate 131, respectively. The contact holes 132 are spaced apart from each other by a predetermined distance. The power connector 1 further includes a plurality of conductive contacts 133 mounted in the contact holes 132. When mounting the socket 12 onto the housing 10, the projection 101 is engaged with the insertion hole 124, thereby preventing the socket 12 from being detached from the first opening 102 of the housing 10. However, because the socket 12 is connected to the housing 10 by engagement between the projection 101 and the insertion hole 124, the socket 12 cannot be easily removed from the housing 10 when the socket 12 is damaged. As a result, the socket 12 has to be replaced, which is troublesome and time-consuming. Therefore, it is desirable to provide a power connector that can overcome the above-mentioned drawbacks.
