Tools and their functions are usually a critical part of the learning curve. You need to understand how they work before you can use them. The following sections discuss the basic tools available in Photoshop and how to use them. Keep in mind that with a basic knowledge of what Photoshop's tools can do, it's quite easy to figure out what they do in certain situations. Selecting a tool There are a wide variety of tools available in the Photoshop toolbox, and each tool comes in varying degrees of complexity. Figure 8-1 shows the Photoshop toolbox. If you're an experienced user, you may have noticed that Photoshop's toolbox may contain several tools that you can't really use. Most likely, these tools were included because they may offer a shortcut to a more advanced tool. That said, you don't need to use every tool available in Photoshop; it may be more effective to simply remember a few of the most useful and basic tools and make your selections based on what you need. **Figure 8-1:** The Photoshop toolbox. For beginners, the most useful tools are those at the bottom of the toolbox that are called Basic and are listed below: Brush: A brush is used for painting, and it can be used to choose a color, create a texture, draw lines, and so on. It can be used to apply gradients, tints, and shades. You can also select a gradient from a color palette on the left side of your screen or choose a preset gradient. All the presets are available with many options for creating gradients. The Brush is a mainstay tool in Photoshop. You use it in every tool in the program. See Figure 8-2. Eraser: A tool for removing unwanted areas of an image, the Eraser enables you to simply paint over an image with a single-color brush, a gradient, or even a brush that has been adjusted to remove specific colors. You can also select an area of an image to be removed, such as a logo or element, and use the Eraser to paint over the logo or element with a new color. Figure 8-3 shows the Eraser in use. Gradient: Used to select a color or a color from a color palette, the Gradient tool is an easy way to apply colors from one or more colors. You can use the Gradient tool to paint a gradient

line for a specific purpose (for example, a transition of colors

Hulu is building out the programming lineup for its live TV streaming service. Viacom's MTV, Nickelodeon and Comedy Central will be joining CNN International and BBC World News in the standard Hulu bundle, the companies announced Wednesday. Hulu added new capabilities to its live TV service this year, allowing users to buy an ad-free version of Hulu's live TV bundle for an additional $14.95 per month. The company also introduced additional payment tiers for paying subscribers, so people who watch a lot of programming for free may want to pay for Hulu's service. The move isn't much of a surprise given that Hulu's streaming service now includes the networks' streaming channels. The company has also been talking about adding more sports to its live TV service. This also could be a way for Hulu to entice people who want to watch sports while on the go to an Apple TV device. Hulu is also in the middle of a merger with 21st Century Fox. The new company, called Fox Corp., will launch on October 15 after the merger is completed. Hulu is going to be owned by Disney, Fox's parent company. Hulu's lineup also includes CBS, CBSN, Fox, Fox Business and FX.Q: Merging two tables with similar columns but each with a different relative ordering of columns I'm relatively new to SQL. I have two tables: Table 1: A1|B1|C1|D1|E1|F1|G1 A2|B2|C2|D2|E2|F2|G2 A3|B3|C3|D3|E3|F3|G3 Table 2: A1|B2|C3|D1|E2|F3|G3 A2|B1|C2|D2|E3|F3|G2 A3|B3|C3|D3|E1|F2|G1 I'm looking for a query to merge these tables into one table that has the columns A1, B1, C1 etc but the ordering is different as specified in Table 2. So looking at the example above it should look like this: Table 3: A1|B1|C1|D1|E1|F1|G1|A2|B2|C2|

There are no major reports of the oil spill in Rochmond, which sent several gallons of oil into nearby waterways. The oil spill occurred around 7:30 a.m. on the eastern end of the Cardiello's Pavilion around the Hilton Garden Inn. Cardiello's is a water park that's located on the Kentucky Derby, The Track. Two people were removed from the oil and later released. One person was transported to the hospital but not for injuries. Due to the recent rainfall, the park is going to close early for the day. It's unclear what the scope of the park is at this time, but they're going to close as early as possible. They closed yesterday, because of the forecast and whatnot. It's going to be closing early. Shumate parks is going to open early. If your daughter is going to spend the day there's nothing I can do about it. A little bit of oil is floating around the pool, all of which will be cleaned

up. The City was notified shortly after this report was made. the Data Store, at the same time. Not all products produced by the manufacturers who release products to market can have a complete understanding of the Data Store on every device that will or might read that Data Store. Further, it should be understood that even if the Data Store includes all of the relevant data, not all users may properly understand the data. Therefore, a fuller comprehension of the best practices for a Data Store might be preferred for some or all of the devices that might read the Data Store. Thus, there is a need to get a fuller understanding of the Data Store contents to improve the app's ability to retrieve data to help improve the user's experience. The '264 patent also describes how the quick response (QR) data code produced by a machine readable code reader might be filtered to save time and reduce chance of errors. The quick response data code might be formed of a variety of information that a computer or a camera can detect with computing resources. The '264 patent recites "[m]any of these uses can be considered to be relatively broad, while others are more specific to the field, for example, the identification and tracking of vehicles. The location and subsequent processing of a QR code are relatively unambiguous and deterministic...." The quick response data code reader might be a
