Now for some complaints. When you invite a reviewer to comment on an image, you can save the changes from within Photoshop, but the changes aren't always perfect. If you don't make any substantial changes to your document, you can upload the file to the cloud as is, but if you add new layers or crop from within Photoshop, those can't be uploaded. This is something that's mostly a "huh" for me, but it's definitely a missed opportunity. Creative Cloud users are in for another treat with this new update and the new cross-device capabilities. I find that some users might not be immediately aware of the new features. It's understandable, but as a consumer who's been exposed to the update over the past few months, I'm more than a little surprised to see so many more features in this release since the last time I used the app. It's important not to get hung up on these features because the cloud editing interface has been around for a while, but this update more than anything else solidifies what's worked well for Adobe – the simplicity of using all mobile apps on a single monitor, regardless of operating system.
