With version 10 of Photoshop, Adobe has put a stronger emphasis on features that help you to quickly retouch images. A pop-out panel brings all your corrections (such as exposure and color adjustments, as well as cropping a scene) to the top. Version 10 of Photoshop also adds a Custom Shape tool for quickly composing a geometric figure, skewing an object, and working with its transformation. A selection border surrounds the selected area with different inverts, so you can quickly choose from the bounding box stamp, cut, copy, and duplicate selections, as well as quickly combine multiple selections. Context-based actions let you quickly, and at the same time accurately, complete multiple-step tasks from a single command. For content creators, Photoshop Elements has always allowed you to share projects with others. You can create or open projects in online services, such as Dropbox and Google Drive. Sharing your project to one of those destinations instantly opens it in the online editor, where people can make alterations. Content-Aware Crop is a new feature that also automatically crops images to make them better. The tool is a preview tool that looks at the portion of the image that needs to be adjusted. Under the hood, Photoshop Elements is now running on a new version of Adobe's Creative SDK, except for those features that are being moved to the embedded version of Photoshop Lightroom CC. The app also has an updated version of Adobe Premier Pro CC.
