Despite this obvious benefit, I saw no real increase in productivity when using Photoshop Sketch on the iPad Pro. I have heard from many Photoshop Sketch users that they also believe they need more screen real estate on the iPad Pro. But for me, Sketch has failed to convince me that I would ever use it more frequently than the existing tools in such a way that I would make Photoshop Sketch the main tool for image creation. I might use the iPad Pro for the real thing. I would certainly use it for its intended purpose, a digital drawing pad. It simply seems that Photoshop Sketch was designed for those who have existing experience or interest in manipulating pen strokes in digital images. For those at the beginning of their artistic career, or for kids who have only been trying to draw since they were children, Photoshop Sketch will simply not spark their imagination as it is currently designed. And, frankly, even if Sketch functionality was complete and an ideal solution for the iPad Pro, I doubt I would be willing to pay the hefty \$99 to \$199 price tag. Why? Photoshop Sketch is not only not something I could imagine using at \$199. It would be something I would not consider buying for under \$100. Even with Apple's brand-new lack of profit margin for 2018, Photoshop Sketch seems like more of an experiment than a real tool for me. However, it will need a bit of refinement before it burns itself up, like some other apps that have seen release before their time. That said, I am positive about the iPad Pro and this digital drawing app. During the presentation, Apple focused heavily on how well-made the iPad Pro is. Even if you would not consider it for the professional photographer, the iPad Pro can probably function as a perfect drawing tablet. With a variety of tools included, from traditional brushes to raster and vector ones, your creativity will be sparked to an even greater degree. There is much potential for this device, particularly if Adobe keeps refining the sketching experience on the iPad Pro. For the future, the iPad Pro will definitely accelerate Photoshop and other creative processes.
