The Center's approach is comprehensive, encompassing analytical chemistry, biological assay systems, molecular biology, chemical synthesis, and medicinal chemistry. Within the scope of its overall goal, the Center organizes its research programs into the following three major areas: 1) microbial chemotherapeutics, 2) mammalian cell biology, and 3) host-pathogen interactions. The Center's cornerstone is the identification, characterization, and development of new antimicrobial agents to counter bacterial and yeast pathogens that are responsible for a range of infections that threaten human health. Key elements of the Center's research strategy are the following: building on its established programs in analytical chemistry and biochemistry; leveraging the analytical tools of molecular biology for the discovery of new targets and rapid assessment of potential in vitro and in vivo efficacy; and developing and applying the critical microbiology skills developed by Center investigators in a broad spectrum of assay systems and pathogens. Using a tiered approach to the discovery and development of 79a2804d6b
