

Los Suaves Discografia

Los Suaves del discografia de los suaves. Los Suaves. La banda naciera en el año 70, y el disco debut lo hizo en 1972 con la canción El Club. Pero .Q: Solving a ceiling integral I am trying to solve the following problem
 $\int_1^2 (\log x + \log(1/x)) \log x \, dx = \int_1^2 \log x \log(1/x) \, dx$
 $\log^2(1/x)$ Using $\log(1/x) = -\log x$ we can rewrite this as $\int_1^2 (\log^2 x - 2\log x \log(-\log x)) \, dx$ Now I am at a complete loss, I do not know what to do. Using integration by parts does not seem applicable here, since there are two logarithmic terms. A: Note that $\int \log^2 x \, dx = \frac{1}{3}x^3 + C$ implies $\int \log^2 x \log x \, dx = \frac{1}{6}x^3 \log \log x + C$. The only way to evaluate the integral is to combine the terms. $\log x$ and $\log(1/x)$ will cancel, so we get $\int_1^2 \frac{1}{2}x^3 \log \log x \, dx = \frac{1}{6}$
 $\int_1^2 x^3 \log \log x \, dx$. For this month's Top Ten Tuesday, I want to revisit the concept of *a story arc*. This is the collection of stages in a story in which one or more significant events occur. It can include book-ending events, such as the starting and ending of the story, or middle events, such as the times when the action picks up or comes to a temporary halt. It can also include smaller events, such as the times when characters are faced with a difficult decision or a dilemma. For this list I'm considering any stories that reach completion in one book, and I'm only considering stories about
