What It Does: The *Node Tools* tool is used to make selections that you can refine and edit by adjusting the area. Once you have made a selection, you can use the Clipping Mask tool to only show that selected area. To hide the selection the Selection Brush tool or Curves tool can be used. A powerful editing tool, the Clone Stamp tool lets you “retouch” images by copying areas of unwanted objects or backgrounds onto the positive in much the way you copy objects from one picture to another. **Adobe Photoshop** has a tool called “Content-Aware Fill”. If you do not have your mouse equipped with your favorite photo editing software (like Photoshop), Content-Aware Fill is designed to fill objects and textured areas with a copy of your photo, as opposed to trying to guess what is being shown in the photograph. **Illustrator** is a bit of a monster in terms of features and processing power. If you're looking at creating something really complex, such as a full graphic novel, then I'd go for a product that's specifically geared to graphic design. But, if you're just looking to enhance your photos and experiment with effects, Illustrator is a great option. **It's important to note the following:**

As I said, the software is a bit of a monster in terms of processing power. That means that as your computer overclocks, your software will, too. This can impact overall performance. Things like expansion cards, more memory, faster hard drives, redundant power supplies, and a better cooling system would be the first things I'd look at if I were you.
