But for all of Lightroom 5's organizational improvements, its image-editing functions remain virtually unchanged from Lightroom 4. The interface is a bit different and some of the tools are slightly changed. Because most of the import procedures are identical, it's easier to start with the description of Lightroom 5's new features. Lightroom 5 will import from most newer, common cameras as well as from the firmware cards on older cameras. Importing PSD files, even from discontinued models, is still a breeze because Lightroom 5 automatically adds all missing metadata to promote speed and accuracy. (The image-editing tools can be very powerful and versatile, but they require a bit of like-minded understanding and practice to be fully optimum.) A particular giant in the photo industry has realized this. I'm pleased to see not only Nikon, but also Canon and Olympus follow suit. Importing from the full-frame format is also a breeze. Lightroom 5 automatically re-sizes images accordingly, and it's a snap to create artistic sized versions of images. I love how Lightroom 5 automatically sharpens images, automatically reduces noise, automatically corrects exposure and color, and automatically removes pesky artifacts like dirt or lens flares. Lightroom 5 also has the ability to process "RAW" images. Although Adobe Photoshop raster images carry higher quality, the RAW format has some advantages, such as being easier to print. I reduced the quality of each image I tried and printed each version at the two highest settings.
