Zooming in, I see that the first image I imported and chose to open in a new space had been composed as a vertical panorama of 1135x1003 pixels. Four circular images of 822 pixels are baked into the larger composite. Those images obviously originated on a smaller sized screen than the iPad Pro with its 1242x2209 pixels. Zooming into the different images is more difficult. When I do, I can see that the outer edges do not really touch the edges of the 4 images that compose the petite panoramic image. It's not a half-baked piece of design, rather, one that was clearly built not with the intent of printing, but with the intent of viewing on a very high resolution display. I then compare its UI to that of the iPad Pro at its native viewing resolution. For instance, I am able to select a specific area in the iPad's display to zoom into, just as easily as the UI allows me to select a specific area in Lightroom to replicate a zoomed in image. When I set the iPad Pro as my primary display, when I zoom Lightroom in, the extent of that zoom is displayed in the Viewer pane, acting as my zoom control. This means that the iPad Pro "zoomed out" to full screen can be moved inversely to the zoom level (i.e., the zoom level controls how far I zoom in on the published image). There is no zoom scale displayed on the iPad Pro. It, and the document, are just like they were before, whether they are zoomed in or out. there's a lack of scale in the viewer pane when zoomed out all the way. It would have been nice if there was a virtual ruler there (in the same way that the one in Lightroom 5 displays the zoom level, even when zoomed out), so I would be able to gauge the extent of my zoom and decide how much space to allot to the next image.

I have it on my lap top, and my MacBook Pro as well. I've used it to edit photos and presentations, organize my digital library, and make brochures and layouts. I just purchased Photoshop Elements 2011 because I want to update my 11-year-old version. Guess I will have to try out for the babysitter award!! **Valerie Chapman:** Used it to edit a variety of photos and scenery and the Safari Preview in the Elements 11 is so robust; I no longer have to use Photoshop Elements 9 on my Mac. I took a class years ago at a local college and we were so impressed with the Mac software; however, we had no idea how good - or bad - Mac software was produced. Our instructor told us she was in it for the money and really didn't care that much for mac computers. The cost of Elements and the Simplify feature to make things look like it is like MS Paint took a sigh of relief at the end of the class. You can very honestly say, with Elements being more expensive than most Mac's, that you're paying for what you get. I never paid for MS Works, but it's so easy to use I'm never sure for how long I've been using it. I love Elements 11. It's a real bargain and is worth every penny.
